

The anatomy of every page.

A designer's field guide to the RAMS website: what each part of a page is called, what it is made of, and the exact type, colour and spacing it is built from — so a wireframe can be read, drawn and handed over in the same language the site is written in.

Companion to `RAMS-Website-Handover.pdf`

Written from the shipped components, September 2026

`rams-website-ebon.vercel.app`

Four words, in order of size.

Everything in this book sits somewhere on this ladder. When you describe a screen to a developer, name the rung you are on and the conversation stops being about “that bit at the top”.

RUNG	MEANS	EXAMPLE ON THIS SITE
Page	One route, one URL	<code>/platform/irds</code> — the IRDS product page
Section	One full-width horizontal band. Owns a background colour and its own vertical padding. Stacked, never nested.	The hero, then the problem section, then capabilities...
Block	A repeatable group inside a section — a card, a tab, a stat, a row of the diagram.	One capability card of the four
Element	A single thing: a line of type, an icon, a button, an image.	The card's title; the orange icon tile

The parts you will name most often

NAME	WHAT IT IS
Eyebrow	The small orange mono-caps label above a heading. Two or three words, no punctuation. Says what kind of section this is.
Headline / H1, H2	The big statement. On this site it is always <i>two lines</i> : line one carries the weight, line two is dimmed and completes the thought.
Subline	The sentence under the headline. One or two lines. If it needs three, the headline is doing too little.
Body / copy	Ordinary paragraph text inside a block.
CTA	Call to action — a button that moves someone forward. Primary is solid orange; secondary is an outline; tertiary is text with an arrow.
Chip / pill	A small rounded label, usually with a dot. Used for status and for the hero's product name.
Card	A bordered white box holding one idea: icon tile, title, body, sometimes a link.
Tile	The small rounded square behind an icon. 48px, orange at 8% fill and 18% border.
Hairline	A 1px divider. <code>#E8E8ED</code> on light, white at 10% on dark.
Surface	The section's background. Chosen from a fixed set (see page 12) — never a one-off colour.
Container	The invisible column the content sits in: max 1280px wide, 24px side padding.
Measure	How wide a run of text is allowed to get. 880px for sublines, 1180px for product shots.
Gutter	The gap between grid columns, and between the container and the screen edge.

The one rule that shapes every page: no two sections that touch may share the same surface. Light, then dark, then light. That alternation is what gives the page its rhythm — it is not decoration, it is the structure.

What is in here.

03	Global chrome — announcement bar, navbar, mega menu, footer
04	Archetype 1 — Page hero (full-bleed video)
05	Archetype 2 — Product hero (centred, with product frame)
06	Archetype 3 — Section header, the opening of every section
07	Archetype 4 — Card grid · Archetype 5 — Split feature
08	Archetype 6 — Proof band · Archetype 7 — Process flow
09	Archetype 8 — Tabbed selector · Archetype 9 — Accordion
10	Archetype 10 — Closing CTA · Archetype 11 — Split form
11	Page maps — how the archetypes stack into real pages
12	Reference — type scale, colour, surfaces, spacing, grid
13	Handing over a new section — the checklist

How each archetype page is laid out

Left: the wireframe, drawn the way you would sketch it, with numbered markers. Right: what each numbered part is called and the exact values it is built from. Everything in the right-hand column is taken from the shipped code, not invented for this document.

A note on sizes. This site does not use Tailwind's named type scale (`text-lg` , `text-xl`). Every size is an explicit pixel value in square brackets — `text-[15px]` . So when you hand over a design, give pixel values. Three numbers per responsive step: mobile, `sm` : `≥640px` , `lg` : `≥1024px` .

The frame around every page.

Three pieces appear on every route and are not part of any page's design: the announcement bar, the navbar and the footer. Treat them as fixed furniture — a page design starts below them.

HEADER - ANNOUNCEMENT BAR + NAVBAR

FOOTER - FOUR COLUMNS + LEGAL ROW

Announcement bar

40px tall, carbon. Region selector left, one rotating message centre, language / Contact / Support / Platform Login right. The login link is the only orange text in the bar.

Height	40px · bg #0E0E0F
Message	12.5px · steel 75% · orange 6px square marker
Links	12px · steel 60% → steel on hover

Navbar

Two states. **Hero mode** — transparent, white links, white logo — while the page is at the top of a dark hero. **Solid** — white bar, dark links — once scrolled past 40px, or immediately on a page whose hero is light.

Height	80px
Labels	12px mono · tracking .14em · UPPERCASE
Hero mode	white 80% → white on hover
Solid	graphite → carbon on hover
Open menu	orange label + 2px underline
Right	ROI calculator pill + search icon

A light hero must declare itself with `data-hero-tone="light"`, otherwise the bar paints white links onto a white page.

Mega menu

Opens on hover after 150ms. Full-width white panel: two or three link columns, each link a **title + one-line description**, plus a dark promo card on the right.

Footer

Carbon. Four columns — brand blurb, two link groups, company (address, contact lines with phone/mail icons) — over a legal row carrying the copyright and policy links.

Page hero — full-bleed video.

The home page opening. Left-aligned copy over a silent looping video, with a client strip pinned to the bottom. Used once per site: this is the front door.

HOME HERO · MIN-HEIGHT 100VH

Why the copy is left, not centred. A full-bleed video needs one quiet corner for type. Centred type would sit on the busiest part of the frame. Every *other* hero on the site is centred, because those have no video behind them.

	NAME	SPEC
1	Headline (H1)	38 / 50 / 62 / 76px · bold · leading 1.05 white, last phrase in orange
2	Subline	14 / 15 / 18px · white 55% · measure 560px
3	Primary CTA	15px semibold · white on orange padding 28 × 14px · hover darkens
4	Secondary CTA	15px semibold · white 1px white 25% border · white 5% fill · blur
5	Tertiary link	13px · white 45% · 32px circled play glyph
6	Client strip	56px tall · blurred panel · logos at 20px, greyscaled to 35% opacity · counter at right

Stacking order (back to front)

- Video, `object-cover`, slow scale drift
- Dark overlay so type stays legible
- Vignette / gradient at the edges
- Content layer (`z-10`)

Entrance

Each element fades up 8–24px on a 0.55–0.95s curve, staggered by ~0.1s in reading order: headline, subline, buttons, watch link, strip. Heroes animate on load; everything below the fold animates on scroll-into-view, once only.

What to hand over

- Headline split across two lines, with the orange phrase marked
- Subline under 20 words
- Both button labels and their destinations
- The video: silent, ≤ 12MB, and a poster frame

Product hero — centred, with the product.

Every platform and solution page opens this way: a chip, a two-line headline, a subtitle, a strapline, two buttons, and the product itself in browser chrome directly beneath.

IRDS HERO · /PLATFORM/IRDS

	NAME	SPEC
1	Chip	11px mono caps · tracking .18em · white 70% 6px orange dot · 1px white 10% border · pill
2	Headline (H1)	56 / 84 / 112px · bold · leading 1.06 tracking -0.045em · two <code></code> lines
3	Subline	15 / 16px · white 60% · measure 880px
4	Strapline	15 / 16px · bold · white – the promise in three beats
5	CTA pair	14px semibold · orange solid + white 15% outline radius 8px · gap 12px
6	Product frame	browser chrome: 3 dots + URL pill measure 1180px · video autoplays muted, loops
7	Client strip	logos greyscaled, low opacity

The product frame is the argument. Nothing on these pages persuades as hard as a real screen of the real application. It is never an illustration of the product, and never a stock mockup.

Variant — with sound

Where the recording carries a soundtrack, a 40px circular speaker control sits in the bottom-right corner of the frame. The video still starts muted — browsers refuse to autoplay audible video — and the control is what turns it on.

Section padding

pt 144 / 176 / 192px · pb 80 / 96 / 112px
The top padding clears the fixed header (80px) plus breathing room.

Section header — how every section opens.

The single most repeated pattern on the site. Eyebrow, two-line heading, subtitle, centred. If you learn one thing from this book, learn this shape — it appears forty-odd times.

DEFAULT SIZE · CENTRED

LEFT-ALIGNED VARIANT · FOR SPLIT LAYOUTS

NAME	SPEC
1 Eyebrow	11px · mono · semibold · tracking .22em UPPERCASE · always signal orange · 20px below
2 Heading line 1	40 / 60 / 78px · bold · tracking -0.04em leading 1.0 · carbon on light, white on dark
3 Heading line 2	same size, <i>dimmed</i> : light → graphite 50% · dark → white-to-transparent gradient
4 Subline	14 / 15px · leading 1.55 · measure 880px light → graphite 65% · dark → white 60%

Sizes

Default	40 / 60 / 78px
Compact	36 / 54 / 68px – when the section's visual is a wide dashboard
Long	for headings that will not fit two short lines

Writing rules

- Eyebrow: two or three words. Never a sentence, never punctuation.
- Heading: aim for **20–26 characters per line**. Longer wraps badly at 78px.
- Line one carries the weight; line two completes the thought and is dimmed.
- Subline optional — plenty of sections work on eyebrow + heading alone.

In the file: <SectionHeader eyebrow top bottom body align size /> . Never retype the classes — if a heading looks different anywhere, that is a bug, not a variant.

Card grid · split feature.

4 — Card grid

PART	SPEC
Card	radius 12px · 1px #E8E8ED · white shadow 0 1px 2px rgba(0,0,0,.02), 0 8px 24px -12px rgba(0,0,0,.06)
Icon tile	48px · radius 10px · orange 8% fill · orange 18% border icon 22px, stroke 2, orange
Title	20 / 22px · semibold · tracking -0.02em
Body	14.5px · leading 1.6 · graphite 65%
Hover	lift 4px + a slow conic shine around the border
Grid	1 col → sm: 2 → lg: 3, 4 or 5 · gap 20–24px

Three, four or five across. Two looks accidental; six makes each card too narrow to say anything.

5 — Split feature

PART	SPEC
Grid	lg:grid-cols-[0.85fr_1.15fr] – copy narrower than media
Alignment	header switches to align="left"
Media	product frame, drawn diagram, or a tinted panel
Stacking	below lg: the media drops under the copy
Gap	40–64px between columns

Alternate which side the media sits on between consecutive split sections, or the page develops a visual limp.

Diagrams are drawn, never screenshots. They are built on a fixed SVG box — 400×240 or 1080×400 — with the labels positioned as percentages of that same box, so the picture and its labels can never drift apart.

Proof band · process flow.

6 — Proof band

PART	SPEC
Number	30 / 34 / 38px bold · tracking -0.02em large variant 44 / 52px
Label	10.5px mono caps · tracking .18em · muted
Divider	1px vertical hairline between stats
Count	three or four. Five reads as a dashboard

Never invent a number. Every figure on this site has to come from RAMS. A plausible-looking statistic that nobody can stand behind is the fastest way to lose an enterprise deal.

7 — Process flow

PART	SPEC
Step number	10.5px mono · orange · tracking .2em
Step title	16–18px semibold
Connector	1px hairline or chevron · never an arrow graphic
Last step	often orange-filled – the outcome
Mobile	stacks vertically, connector rotates 90°

Four steps is the shape that repeats across this site — inspect, classify, rectify, verify. Three is fine. More than five and the row turns into a timeline, which is a different pattern.

Tabbed selector · accordion.

8 — Tabbed selector

PART	SPEC
Tab, resting	13px semibold · graphite 60% · transparent
Tab, active	carbon text · white pill + hairline, or orange underline
Panel	cross-fades, 0.3s. Never slides – the panels differ in height
Default	first tab open on load. Never all-closed

Used for: the industry selector, the FAQ topic filter, the “what comes with each solution” diagram, the privacy policy’s clause list.

9 — Accordion (FAQ)

PART	SPEC
Question	15–16px semibold · carbon · full-width button
Answer	14.5px · leading 1.65 · graphite 65% · measure 900px
Divider	1px hairline between rows
Glyph	plus → minus, or chevron rotating 180°
Motion	height auto-animates over 0.3s

One open at a time. Rows are the full width of the container — an accordion in a narrow column reads as a list of links.

Accessibility, not decoration: the question is a real `<button>` with `aria-expanded`, so a keyboard and a screen reader can both work it. Same for tabs.

Closing CTA · split form.

10 — Closing CTA

PART	SPEC
Surface	dark, with an orange glow rising from the bottom edge
Headline	32 / 46 / 60px bold · tracking -0.04em line two at white 45%, key phrase orange
Subline	16 / 18px · white 55% · measure 880px
Buttons	16px semibold · fully rounded · padding 32 × 16px orange solid, white outline, ghost
Padding	128 / 160 / 176px top and bottom – the most air on the page

Every product and solution page ends with this. It is the last thing a reader sees, so it gets the deepest padding on the page and the only three-button row on the site.

11 — Split form / auth

PART	SPEC
Split	1.05fr dark / 0.95fr white · dark half fixed, form half scrolls
Label	12px semibold carbon · orange * when required
Input	14px · radius 8px · 1px #E8E8ED focus: 2px orange 30% ring
Error	12.5px · #E5484D · triangle glyph · under the field
Buttons	full-width · radius 8px (not pill – this is a utility screen)
Chrome	covers navbar and footer entirely

Used by the platform sign-in. The contact page uses the same field vocabulary inside an ordinary section instead.

How they stack into real pages.

A page is a vertical stack of the archetypes on the previous pages, alternating light and dark.
Here are three real ones, top to bottom.

Home — /

1	Page hero — full-bleed video
2	Platform reveal — split feature
3	Challenge selector — tabs
4	Ecosystem — card grid
5	Operation showcase — split feature
6	Three ways to start — card grid ×3
7	Technology systems — card grid
8	Industries — carousel
9	Why RAMS — split feature
10	Customer success — proof band
11	Trust — logo wall
12	Closing CTA

Platform · IRDS — /platform/irds

1	Product hero + product frame
2	Problem — card grid
3	Overview — split feature
4	How it works — process flow
5	Capabilities — card grid
6	Experience — tabbed product shots
7	Outcomes — proof band
8	Integrations — logo grid
9	FAQ — accordion
10	Closing CTA

The surface rhythm

Read a page as a column of bands. Two identical bands touching is the one layout error that shows up instantly at 10% zoom — which is exactly how you should check a page before handing it over.

Where the archetypes are used

ARCHETYPE	PAGES
Page hero	home only
Product hero	every platform + solution page
Section header	every section, everywhere
Card grid	every page
Split feature	product, solution, about
Proof band	product, solution, home
Process flow	product, services
Tabs	home, industries, FAQs, privacy
Accordion	FAQ sections
Closing CTA	every page except legal + auth
Split form	sign-in

The numbers, on one page.

Type families

Headings	IBM Plex Sans · 300–700
Body & UI	Roboto · 300–700
Labels	Roboto Mono · 300–500

Type scale

ROLE	SIZE · WEIGHT · TRACKING
Page hero H1	56 / 84 / 112 · bold · -0.045em
Home hero H1	38 / 50 / 62 / 76 · bold · 1.05
Section heading	40 / 60 / 78 · bold · -0.04em
Compact heading	36 / 54 / 68 · bold · -0.04em
CTA headline	36 / 58 / 76 · bold · -0.035em
Sub-headline h3	24–28 · semibold · -0.02em
Card title	20 / 22 · semibold · -0.02em
Stat, large	44 / 52 · bold · -0.035em
Stat, band	30 / 34 / 38 · bold · -0.02em
Section subtitle	14 / 15 · normal · leading 1.55
Body paragraph	15–16 · normal · leading 1.6–1.65
Card body	14.5 · normal · leading 1.6
Button label	14–16 · semibold
Nav label	12 mono caps · .14em
Eyebrow	11 mono caps · semibold · .22em
Kicker	10.5 mono caps · bold · .18–.22em
Micro label	9 / 9.5 mono caps · bold · .16em

Colour

-  **Carbon** #0E0E0F — titles, dark surfaces · 45%
-  **Graphite** #33363A — body copy · 20%
-  **Steel** #D9DBDD — dividers, surfaces · 20%
-  **Signal orange** #FF6A00 — CTAs, eyebrows · 5%
-  **Alert red** #E5484D — errors only
-  **Hairline** #E8E8ED — every 1px border on light

Text opacity ladder

ROLE	LIGHT	DARK
Title	carbon	white
Body	graphite 65%	white 55–60%
Muted	graphite 45%	white 35–40%
Accent	orange	orange

Surfaces

white	#FFFFFF
offWhite	#F5F5F7
warm	#F5F5F7 at 60%
ink	#08080A flat
inkTeal	#0B1619 flat
darkTop / Mid / Bottom	radial #1D1D1F → #0E0E0F → #08080A, glow from the top, middle or bottom edge

Layout and motion.

Layout	
Container	max 1280px · padding 24 / 20 / 16px
Section padding	pt 112 / 144 / 176px
Measures	880 subline · 900 answer · 1180 product · 1240 wide
Grid gap	20–24px cards · 40–64px split columns
Breakpoints	sm 640 · md 768 · lg 1024 · xl 1280
Radius	8 inputs · 12 cards · 16–24 panels · full pills

Motion	
Curve	cubic-bezier(0.22, 1, 0.36, 1)
Entrance	fade + 8–28px rise · 0.55–0.95s · stagger 0.1s
Trigger	heroes on load · sections on scroll, once
Hover	card lifts 4px · colour 0.2s
Icons	
Library	Lucide – one library, no mixing
Size	22px in a card tile · 16–18px inline · 14px in the footer
Stroke	2 – never filled, never two-tone
Colour	orange in a tile · inherits the text colour elsewhere

Imagery

- **Product shots are real screens** of the real application, in the browser frame.
- **Diagrams are drawn** in the page, not exported as images – they stay sharp and can animate.
- **No stock photography of people.** The site uses none, anywhere.
- **No third-party logos** unless RAMS holds permission – that includes customer and partner marks.

Video

Format	MP4 · H.264 · yuv420p · faststart
Size	aim ≤ 12MB silent · ≤ 35MB with a soundtrack
Poster	always – a frame from ~2s in, so the box is never empty
Naming	version the filename (demo-5 → demo-6). The CDN caches by path, so overwriting a file leaves the old cut on screen

Handing over a new section.

What a developer needs from you before they can build it, in the order they will ask for it.

GIVE THEM	LOOKS LIKE
1 · The archetype	"Card grid, four across" — name it from pages 4–10 rather than describing it
2 · The surface	"offWhite" — and check what the sections above and below it use
3 · Eyebrow	Two or three words, no punctuation
4 · Heading	Both lines, split where you want the break, 20–26 characters each
5 · Subline	One or two lines, or say explicitly there is none
6 · Block content	Every card's icon name, title and body — all of them, not a sample
7 · Links	Every button label and the route it goes to
8 · Media	The actual file. Video: silent unless the soundtrack matters, ≤ 12MB, with a poster frame
9 · Mobile	How the grid collapses, if it is not the obvious 3 → 2 → 1

Things that are decided already — don't redesign them

- Type sizes and weights — pick from the scale on page 12
- The colour palette, and the 45/20/20/5 balance between the four
- Card radius, border and shadow
- Section padding and container width
- The motion curve and the entrance behaviour
- The section header shape — eyebrow, two lines, subline

Things you decide every time

- Which archetype the content wants to be
- Which surface, given the neighbours
- How many blocks across
- Which single phrase in the heading goes orange — one per heading, never two
- Whether the section needs a visual at all, or whether type alone does it better

The test before you hand anything over: shrink the page to 10% and look at the column of bands. You should see alternating light and dark, an even rhythm of padding, and one clear shape per band. If two bands merge into one grey smear, the design is not finished — regardless of how good the detail looks at 100%.

Companion documents

docs/RAMS-Website-Handover.pdf — how the site is built, and which button goes where
 docs/section-header.md — the section header, in full
 docs/typography.md — the font system and the complete type scale
